

**BEESTRONG** when included in the diet for feeding larvae, more larvae develop successfully into bees!

**BEESTRONG** increases the survival-rate of the brood and

**BEESTRONG** is also beneficial to healthy bees. When **BEESTRONG** was fed to adult bees in cage experiments, the bees receiving **BEESTRONG** lived significantly longer.

both studies by bee-health group of prof. dr. K. Crailsheim, Univ. of Graz, Austria, conducted summer 2013

**BEESTRONG** has a positive effect on colony dynamic increasing both larvae survival-rate and bees longevity.

= normal colony  
one dose 25 ml

= weak, stressed or  
even diseased colony  
double dose 50 ml

## BeeColonies need our support to survive and to stay strong and healthy !

Bees suffer from many stress factors including pesticides, Varroa mites and brood diseases, such as Chalkbrood or American Foulbrood and European Foulbrood or Nosema and recently Small Hive Beetle.

We cannot change the environment and we cannot eradicate the diseases, but the least we can do is to support our bees to better cope with these stress factors.

Bee-colonies are nowadays increasingly under pressure by the

3 Ps

### Poor Nutrition

Industrial Mono Agriculture, decreasing Variation of plants (Pollen), increasing protein poverty

### Parasites / Pathogens

Varroa Mite, Nosema, Foulbrood...

### Pesticides

On-going distribution

We at BeeVital committed ourselves to develop *the natural source, high quality and concentrated BeeFeed*. And we did: **BEESTRONG**

**BEESTRONG** is our best solution for beekeepers to protect their colonies against diseases attacks and pesticide injury.

**BEESTRONG** supplies the needed protein rear brood and grow larvae into adult bees.

**BEESTRONG** is based on purified protein it has the ideal amino acid composition almost like the bees' Royal Jelly.

Essential Amino acid	Minimum % required	Royal Jelly	BeeVital <b>BEESTRONG</b>
Threonine	3.0	4.0	<b>5.4</b>
Valine	4.0	6.7	<b>4.7</b>
Methionine	1.5	1.9	<b>1.6</b>
Leucine	4.5	7.7	<b>6.2</b>
IsoLeucine	4.0	5.3	<b>4.7</b>
Phenylalanine	2.5	4.1	<b>2.3</b>
Lysine	3.0	6.7	<b>4.7</b>
Histidine	1.5	2.2	<b>0.8</b>
Arginine	3.0	5.1	<b>8.5</b>
Tryptophan	1.0	1.3	<b>4.7</b>

## WHAT IS **BEESTRONG** ?

**BEESTRONG** is a bee feed with function !

**BEESTRONG** is Highly Concentrated

Please follow the instructions below on how to dilute and use the product.

Delivered at an extremely high concentration for convenient use, it should not be fed to the bees undiluted.

**BEESTRONG** is Safe

when fed to the bees with sugar solution it has no adverse effect on brood, adult bees or queens even if more than recommended is used.

## HOW TO USE **BEESTRONG** ?

**BEESTRONG** is Easy To Use

To use it you do not need any complicated techniques or protection measures.

Simply put **BEESTRONG** into the feeding sugar syrup and mix, or sprinkle it on pollen patties or make sugar dough from it - before feeding it to your bees.

## WHEN TO USE **BEESTRONG** ?

**BEESTRONG** should be used in autumn and early spring or whenever you feed your bee colonies.

## HOW MUCH TO USE ?

When you start using **BEESTRONG** we recommend to use the double dose (50ml) – just to be safe.

if your colonies are all well and there is no sign of specific problems then use 25 ml **BEESTRONG** per colony diluted in sugar syrup.

if your colonies are weak use the double dose (50 ml) of **BEESTRONG** per colony diluted in sugar syrup.

## WHEN IN TROUBLE...

**BEESTRONG** can be used at any time when your bees could need the little extra.

Simply dilute a dose (25ml) or a double dose (50ml) in 250ml sugar syrup – stir well and feed directly.
